**Job Title: Senior Software Engineer (5+ years experience)**

**Location:** Remote **Job Type:** Full-time

**### About the Role**

We are seeking a highly skilled and visionary **Senior Software Engineer** with a minimum of **5-7 years of experience** to lead our core engineering initiatives. In this role, you will go beyond writing code; you will architect scalable systems and drive the technical direction of our most critical products.

You will work at the intersection of product, design, and infrastructure to build high-performance applications that solve complex business challenges. As a senior member of the team, you will be a technical anchor, fostering a culture of engineering excellence and continuous improvement.

**### Key Responsibilities**

- **System Architecture:** Design and implement scalable, high-availability distributed systems and microservices.
- **Technical Leadership:** Lead the end-to-end development of complex features, from initial technical design documents to production deployment.
- **Code Quality:** Establish and enforce best practices through deep code reviews, automated testing, and CI/CD optimization.
- **Cross-Functional Collaboration:** Partner with Product Managers and Designers to translate high-level business requirements into executable technical roadmaps.
- **Performance Optimization:** Analyze and improve the performance, security, and reliability of our existing tech stack.
- **Mentorship:** Actively mentor junior and mid-level engineers, providing guidance on software design patterns and career growth.
- **Innovation:** Stay current with emerging technologies and evaluate their potential to enhance our development ecosystem.

**### Requirements**

- **Professional Experience:** Minimum of 5 years of relevant experience in full-stack or backend software engineering.
- **Core Languages:** Mastery of at least one major programming language (e.g., Python, Java, Go, or Node.js).
- **Database Expertise:** Strong SQL skills and experience designing relational or NoSQL database schemas.
- **Modern Infrastructure:** Deep understanding of cloud platforms (AWS, Azure, or GCP) and containerization using Docker or Kubernetes.
- **Architectural Patterns:** Proven experience with microservices, API design (REST/GraphQL), and asynchronous messaging (e.g., Kafka or RabbitMQ).
- **Education:** Bachelor’s degree in Computer Science, Software Engineering, or a related quantitative field; Master’s degree preferred.

- **Problem Solving:** Exceptional ability to debug complex, distributed system issues and provide long-term fixes.

### Nice-to-Have Skills

- **DevOps Focus:** Experience with Infrastructure as Code (Terraform or CloudFormation).
- **Frontend Knowledge:** Familiarity with modern frontend frameworks like React or Vue.js.
- **Security First:** Experience implementing OAuth2, OpenID Connect, or other security best practices.
- **Open Source:** Contributions to open-source projects or a strong presence in the developer community.

### What We Offer

- **Competitive Compensation:** Top-tier salary and comprehensive health, dental, and vision benefits.
- **Work-Life Harmony:** Flexible work hours and a fully remote environment.
- **Time Off:** Generous paid time off, including vacation, sick leave, and holidays.
- **Growth Budget:** Dedicated stipends for workshops, technical certifications, and global conferences.
- **Impactful Culture:** A supportive environment that values diverse perspectives and technical innovation.
